

## 5

## ways to enhance application delivery and security with Citrix and AWS

to boost branch office connectivity

**1** Deliver better experiences to global users

Empower your distributed workforce by boosting resource availability and delivering high-performance workspaces and business critical applications wherever work gets done.

**2** Support your choice of environments and applications

Meet your unique business needs with the flexibility to support a combination of cloud and on-premises environments, as well as legacy and modern applications.

**3** Strengthen network and application security

Gain comprehensive protection for applications, APIs, and traffic. Enforce security policies consistently throughout your hybrid cloud environment.

**4** Simplify hybrid cloud management with operational consistency

Leverage Citrix Application Delivery Management to establish central visibility across your cloud network. Maintain the same functionality and operational experience you are accustomed to on-premises.

**5** Accelerate your journey to microservices

Deliver microservices-based applications with great experience, performance, and security. Integrate with Kubernetes and other popular open-source environments and tools.

Deliver better application experiences, security, and performance in a hybrid world.
