

Achieve better business performance with AI-powered automation

Automate business operations to improve business performance and provide better customer experiences

Challenges:

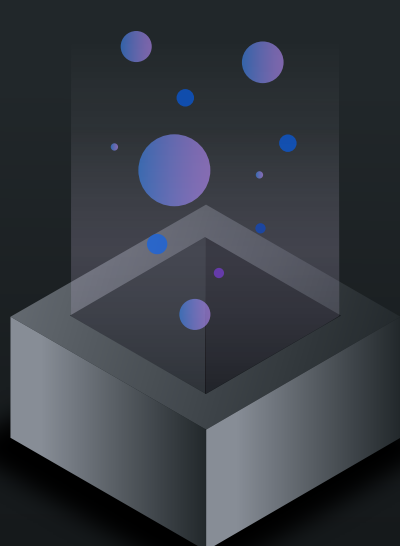

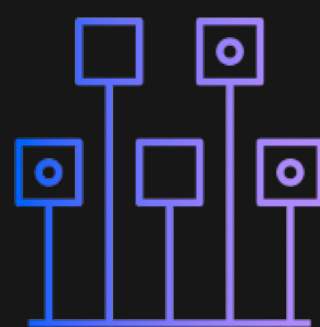

Businesses lose valuable time and resources on inefficient processes causing bottlenecks and other operational challenges. Integrating an AI-powered automation strategy is key to remain competitive, simplify operations and make operations more intelligent.

2/3

of organizations

encountered broken processes in the past 6 months

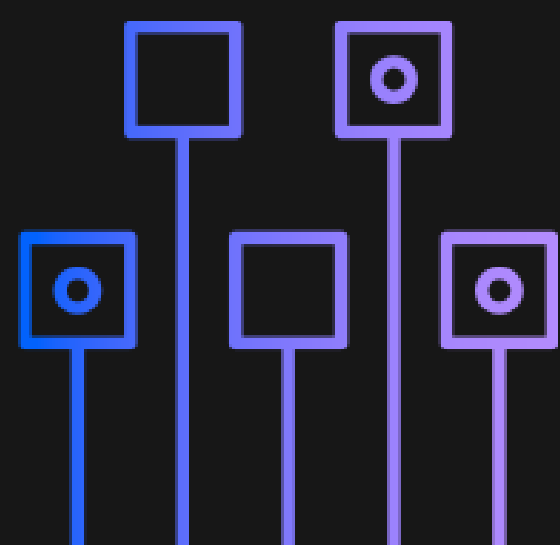

Our end-to-end automation solution comes with integrated technologies and low-code tools that can be applied using flexible deployment options, so you can start where you are and scale. With over 14,000 automation practitioners, 5,000 automation clients and ~4,000 bots and runtime scripts deployed, IBM has extensive domain knowledge and industry experience in helping organizations achieve operational excellence.

IBM Cloud Pak® for Business Automation, part of the IBM Automation platform, helps you realize the full potential of AI-powered automation by

- 
Identifying opportunities for improvement
- 
Applying automation to key areas for greater business impact
- 
Empowering business users to create business applications quickly to address changing business requirements
- 
Augmenting your workforce with AI-powered automation

IBM is your trusted and experienced partner.

IBM offers a modular set of integrated software, built for any cloud, to quickly solve your operational challenges with a broad set of automation capabilities – capture, content, decisions, process mining, RPA and workflows – and best practices across workflows to optimize your operations and speed innovation.
