

# Secure Your Applications and APIs Across Multi-Cloud

with Citrix Application Delivery Controller (ADC)

Applications and APIs are the most valuable and vulnerable assets for any business—and securing them is critical.

## The State of Application Security

### App Breaches

43%

of organizations have experienced application breaches

### Readiness

62%

of companies are not very confident about their application security

### Security Budget

50%

of organizations will increase their budgets for application security

Statistics sources from left to right: 2019 Data Breach Investigations Report by Verizon and Cybersecurity Insiders Application Security Report 2018 (second and third statistics)

The Citrix application and API security solution helps you achieve a strong and consistent security posture across multi-cloud with the simplicity of a single license.

## Secure Your Applications and APIs with Comprehensive, Layered, and Proven Protection

When it comes to comprehensive, layered, and proven security for your monolithic and microservices-based applications, only Citrix L3-7 security features give you the arsenal you need to fight the war on bad actors with:

- Web application firewall
- Bot management
- API protection
- TLS offload and management
- Layer 7 DDoS protection
- Rich analytics across deployments
- AI/ML-powered behavior and zero-day protection
- Microservices-based application protection
- Lower latency and low TCO for on-prem and cloud deployments

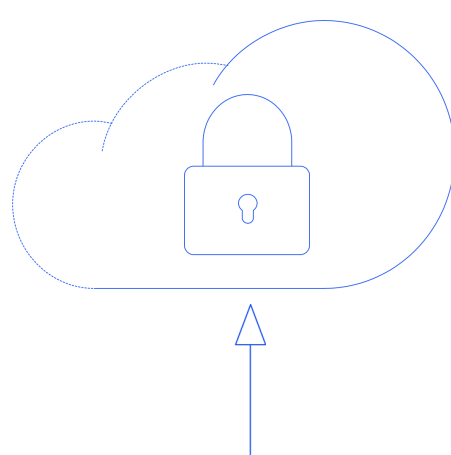

Citrix WAF is NSS Labs validated and top rated for price/performance and security efficacy, so you can be confident that you've made the right choice for helping you achieve PCI-DSS compliance.

**Simplicity of a single license:** Comprehensive security across multi-cloud

## Move to Multi-Cloud Faster

Citrix accelerates your journey to multi-cloud with:

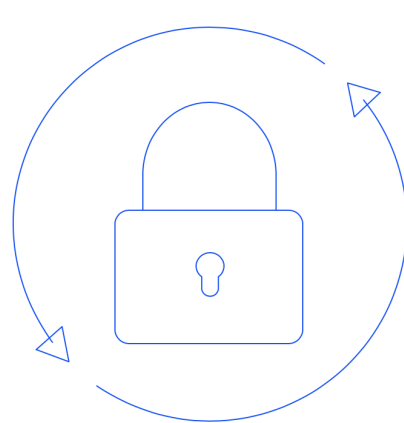

- **Operational consistency:** Only the Citrix ADC portfolio is built on a single code base, giving you the capability to define and enforce consistent security policies across any environment and form factor.
- **Holistic visibility:** Only Citrix ADM enables you to gain insights across multi-cloud to proactively identify and remediate threats.
- **Flexible licensing:** Pooled-capacity licensing allows you to shift security licenses and capacity to where you need it most with just a few clicks.
- **Unified security license:** One license gets you all the security features you need.
- **Cloud-based control and management plane:** Citrix ADM as a service enables you to deploy and troubleshoot faster.

## Enable SecOps at DevOps Speed

Now SecOps can ensure that your applications stay secure no matter how fast your developers create new functionality. Citrix ADC provides:

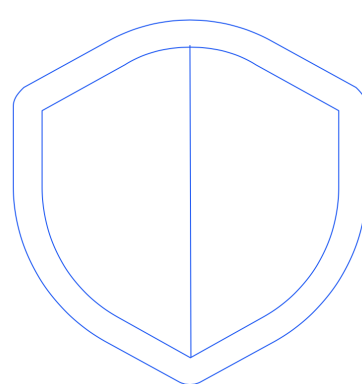

- Support for monolithic and microservices-based applications
- Integrated API protection
- Integration with DevOps tools like Swagger
- Support for service mesh architectures and Istio control plane

## Enforce Consistent Security Policies for Effective Compliance and Governance

Only Citrix offers a single pane of glass for holistic visibility and operations so that you can apply consistent security policies across all your ADCs wherever they are deployed to:

- Achieve consistent security posture
- Detect configuration drift
- Enforce SSL compliance and governance
- and more

2,000+ customers rely on Citrix ADC for application and API security
