Citrix SD-WAN for remote work
Enable your workforce to be productive in this new era of working from home

Challenges of supporting remote workers at scale

Bandwidth competition with shared users • Lack of enterprise-grade security • No control over internet • Slow and unscalable VPNs

---

Citrix SD-WAN helps your people work effectively from home

Quick connection to corporate network:
- More bandwidth
- Greater resiliency
- Better application experience
- Enterprise-grade security

Fast and scalable Windows Virtual Desktop and Citrix Virtual Apps and Desktops
- Lower cost
- Better connectivity to on-premises Active Directory and database

---

5 ways to ensure that your workforce has a fast, always-on application experience while working from home

- Connect your at-home workforce quickly
- Ensure a quality experience
- Remain secure and compliant always
- Scale your virtual apps and desktops in the cloud
- Maintain visibility and control at scale

It doesn't matter if you're open for business if your workforce can't connect to their apps

Your workforce can't be productive if they don't have reliable access to their applications and other resources.

Citrix SD-WAN is the solution you need, thanks to its:

- **Simplicity:** Intuitive, plug-and-play Citrix SD-WAN 110 appliance
- **Fast scalable deployment:** Single pane of glass, zero-touch configuration, and deployment templates

---

Your workers can't be productive if you can't give them an optimal application experience

In this new era of working from home, your workers are only as productive as the quality of their application experience enables them to be. When their home networks and internet connections are stressed because of internet congestion and sharing bandwidth with family members, you must ensure that your workers have a high-quality application experience.

Citrix SD-WAN provides:

- **Connection intelligence:** Achieve internet-connection resiliency with LTE backup with sub-second failover and augmented bandwidth by aggregating broadband with LTE
- **Application intelligence:** Detect, classify, and accelerate 4,500+ SaaS, cloud, and virtual applications; deploy bi-directional QoS; leverage selective packet replication for latency-sensitive applications; and ensure the best Office 365 experience by direct traffic to nearest PoP

Your attack surface just got bigger, and traditional VPNs lack scalability and granularity

With bad actors stepping up the pace, Citrix SD-WAN provides a granular and scalable implementation of enterprise-grade security. The highlights are:

- **Comprehensive, layered security** with integrated, application-aware firewall; encrypted traffic; and automated connectivity to secure web gateway cloud services for cloud traffic inspection
- **Granular security** with Citrix SD-WAN
- **Centrally defined security policies** with one-touch deployment

---

The cloud is your friend for faster and cheaper scaling of virtual apps and desktops

Companies are using cloud-based Windows Virtual Desktop and Citrix Virtual Apps and Desktops (CVAD) to quickly scale remote access to applications for all of their personnel working from home. These cloud-based solutions also eliminate the need to buy and ship thousands of laptops to staff.

- **Keep data secure** by leaving your Active Directory and database on-premises and using the cloud for compute only
- **Reduce data connectivity costs** by providing connectivity between your data center and cloud leveraging inexpensive internet connectivity rather than costly and complex MPLS
- **Move to cloud faster** with automatic provisioning of Citrix SD-WAN in Azure or by adding Citrix SD-WAN instances in any public cloud

---

You can't control what you can't see

Maintaining visibility and control at scale is challenging. When you're managing thousands of remote workers during uncertain times, you need holistic visibility for holistic control.

Citrix SD-WAN provides:

- **A single place** to holistically manage connectivity for your entire workforce
- **All the information you need** for comprehensive visibility into users, permissions, applications, and the health of WAN links
- **Easy onboarding** through automated zero-touch deployment and repeatable templates
- **Granular compliance controls** for centrally defined, per-application security policies and zone-based segmentation

---

Deploy Citrix SD-WAN to ad hoc locations wherever needed so your workers can immediately access their applications and desktops on any device

Clinic and field hospital • Call center, distribution center, and warehouse • Food ordering and delivery services

---

Citrix is your partner for business continuity. Be certain in uncertain times.
