

▶ MEDICAL IMAGING DATA MANAGEMENT

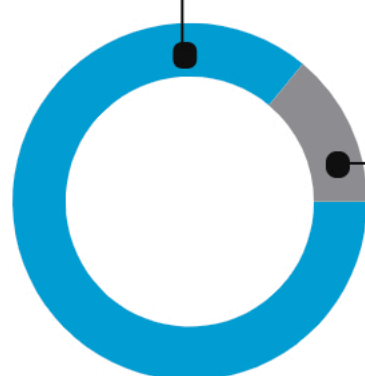

Your patients are counting on you to provide quality care today. But your industry is evolving rapidly, and your strategy for managing your organization's clinical and business data will play a big role in how successful you will be in the future. A recent CHIME survey asked a 100 industry professionals about their organization's imaging management strategy. See how you stack up against your peers below.

Has your organization considered consolidate clinical, revenue cycle management and business information into a single platform?

86%

LEADER

of organizations surveyed have placed importance having a single platform is important.

You are in good company with the leading healthcare organizations. Although they may not yet have moved to a single platform, understanding the importance is the first step.

LAGGARD

Only

14%

including 4% who didn't even consider it, agree with you.

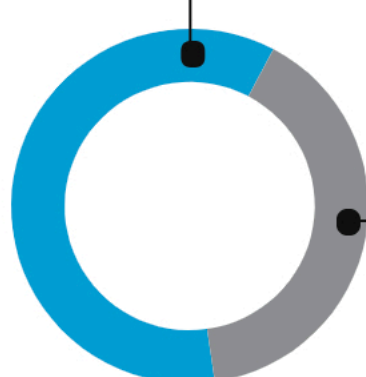

It's time for your organization to embrace the benefits of a single data management platform.

Have you consolidated onto one medical image management platform or do you use multiple platforms?

APPROXIMATELY

60%

LEADER

of healthcare organizations have consolidated imaging data to a single platform.

You are saving time, money and improving patient outcomes. Most importantly, you are poised to handle future changes to the data landscape and be the trusted provider for your patients for decades.

LAGGARD

40%

of your peers are using multiple platforms.

This means your organization may be wasting time and money on unnecessary tasks and infrastructure, while your clinicians might struggle to find patient information when they need it.
