# Enterprise storage architecture for next-generation applications

IBM® Storage Fusion
As hybrid cloud adoption grows, so does the need to manage and access data across the enterprise, including the public cloud.

57%

According to a market-assessment survey conducted by IDC in 2020, 57% of respondents have deployed containers in production.[1]

66%

It's predicted that by 2025, nearly 66% of enterprises will be prolific software producers with code deployed daily, and that over 90% of new enterprise applications will be cloud native.[2]

Red Hat® OpenShift®

IBM® Storage Fusion

Storage platform and services

IBM Storage Fusion provides seamless data access and management across your enterprise and cloud environments.

IBM Storage Fusion is designed to:

Provide a faster and lower-cost path to AI and hybrid cloud.

Bridge the gap between applications and the storage platform.

Fuse the storage platform and services into a single application-aware storage architecture.

Learn how IBM Storage Fusion provides enterprise-grade data orchestration and data protection services for container-native applications running on Red Hat OpenShift.
